Data for Decision Making

The Data for Decision Making (DDM) Project was established in 1991 at Harvard University as a consortium with the Research Triangle Institute and Intercultural Communication, Inc, and with support from the United States Agency for International Development. The mission of the project is to work with governments and their senior decision makers to develop national capacities to manage health sector reform. Development of health sector capability requires making optimal use of available data and advanced analytical techniques to identify problems, develop policy, and strengthen management in the health care sector.

In the 1990s, health systems worldwide face a multitude of challenges: providing services for all, responding to the needs of growing and aging populations, and sustaining the child survival gains achieved in the 1980s. Governments and their Ministries of Health increasingly call for health sector reform to provide quality services more efficiently, to reduce inequalities, and to develop new linkages between the private and public sectors.

The DDM project works with countries by making its technical staff available for fact-finding or advisory visits. Host country officials and DDM project experts develop mutually agreeable problem-solving strategies. DDM tools and studies include: priority setting and cost-effectiveness analysis; political mapping; national health accounts; private-public sector linkages; geographic information systems; research communication; budget tracking system; and democracy and health.

This project is supported by the Office of Health and Nutrition, Health Policy Reform Division, United States Agency for International Development cooperative agreement no. DPE-5991-A-00-1052-00.

Data for Decision Making Publication Series

DDM publications to date include the following:

1. National Health Accounts in Developing Countries: Improving the Foundation

By Ravindra Rannan-Eliya and Peter Berman

1S. Cuentas Nacionales de Salud: Mejorando las Bases Metodológicas

Por Ravindra Rannan-Eliya y Peter Berman

2. Selecting an Essential Package of Health Services Using Cost-Effectiveness Analysis: A Manual for Professionals in Developing Countries

By Logan Brenzel

3. Democracy and Health Series: An Overview of Issues Presented in Four Papers

By Michael Reich

4. Political Mapping of Health Policy: A Guide for Managing the Political Dimensions of Health Policy

By Michael Reich

4.1. Political Mapping Software with Manual Ver. 1.2

By Michael Reich and David Cooper

5. Assessing the Private Sector: Using Non-Government Resources to Strengthen Public Health Goals: Methodological Guidelines*

By Peter Berman and Kara Hanson

6. Health Resources Planning Model (HRP): User's Guide and Software

By Oleh Wolowyna, Gustavo Angeles and Erin Newton

7. A General Cohort-Component Population Project Model in Host (NPROJ): User's Guide and Software Ver. 3.5

By Oleh Wolowyna, Gustavo Angeles and Erin Newton

8. Egypt: Health Sector Brief

By Dayl Donaldson

9. The Role of Private Providers in Maternal and Child Health and Family Planning Services in Developing Countries: Analysis of DHS Data from 11 Countries

By Laura Rose and Research Triangle Institute

10. Zambia: Non-Governmental Health Care Provision*

By Peter Berman, Kasirim Nwuke, Ravindra Rannan-Eliya and Allast Mwanza

11. Kenya: Non-Governmental Health Care Provision*

By Peter Berman, Kasirim Nwuke, Kara Hanson, Muthoni Kariuki, Karanja Mbugua, Sam Ongayo and Tom Omurwa

* / Reports supported by Health and Human Resources Research and Analysis project (HHRAA) of USAID's Africa Bureau

12. Conference Report - Private and Non-Governmental Providers: Partners for Public Health in Africa, Nairbobi, Kenya, November 28, 1994 - December 1, 1994*

By Gerald Hursh-Cesar, Peter Berman, Kara Hanson, Ravi Rannan-Eliya and Joseph Rittmann

12.1. Conference Report Summaries: Private Providers Contributions to Public Health in Four African Countries, Nairbobi, Kenya, November 28, 1994 - December 1, 1994*

By Gerald Hursh-Cesar, Peter Berman, Kara Hanson, Ravi Rannan-Eliya, Joseph Rittmann and Kristen Purdy

13. Non-Government Financing and Provision of Health Services in Africa: A Background Paper*

By Kara Hanson and Peter Berman

14. Case Studies of Mosque and Church Clinics in Cairo, Egypt

By Priti Dave Sen

15. National Health Accounts of Egypt

By Department of Planning/Ministry of Health, Egypt and Data for Decision Making Project

15S. Cuentas Nacionales de Salud: El Caso de Egipto

Por El Departamento de Planification/Ministerio de Salud, Egipto y el Proyecto Data for Decision Making

16. Egypt: Strategies for Health Sector Change

By Peter Berman, Michael Reich, Julia Walsh, A.K. Nandakumar, Nancy Pollock, Hassan Salah, Winnie Yip, Nihal Hafez and Ali Swelam

17. Health Budget Tracking System - Phase I Pilot Study Results: Alexandria 1992/93

By Gordon Cressman and Oleh Wolowyna

18. Health Budget Tracking System - Phase I Pilot Study Results: Bani Swayf 1992/93

By Gordon Cressman and Oleh Wolowyna

19. Health Budget Tracking System - Phase I Pilot Study Results: Suez 1992/93

By Gordon Cressman and Oleh Wolowyna

20. Resource Mobilization: Methodological Guidelines*

By Mukesh Chawla and Peter Berman

20F. La Mobilisation des Ressources: Guide Méthodologique*

Par Mukesh Chawla et Peter Berman

20.1. Developing and Implementing a Resource Mobilization Strategy*

By Mukesh Chawla and Peter Berman

20.1F. Stratégie de Mobilisation des Ressources: Développement et Mise en Oeuvre*

Par Mukesh Chawla et Peter Berman

20.2. Experiences with Resource Mobilization Strategies in Five Developing Countries: What Can We Learn?*

By Mukesh Chawla and Ravindra Rannan-Eliya

20.2F. Expériences en Matière de Mobilisation des Ressources dans Cinq Pays en Développement — Que Peut-on en Tirer?*

Par Mukesh Chawla et Ravindra Rannan-Eliya

*/ Reports supported by Health and Human Resources Research and Analysis project (HHRAA) of USAID's Africa Bureau

21. Improving Hospital Performance through Policies to Increase Hospital Autonomy: Methodological Guidelines*

By Mukesh Chawla and Peter Berman

21F. L'Autonomie Hospitalière: Guide Méthodologique*

Par Mukesh Chawla et Peter Berman

21.1. Improving Hospital Performance through Policies to Increase Hospital Autonomy: Implementation Guidelines*

By Mukesh Chawla and Ramesh Govindaraj

21.1F. L'Autonomie Hospitalière: Guide de Mise en Oeuvre*

Par Mukesh Chawla et Ramesh Govindaraj

21.2. Recent Experiences with Hospital Autonomy in Developing Countries — What Can We Learn?*

By Ramesh Govindaraj and Mukesh Chawla

21.2F. Récentes Expériences en Matière d'Autonomie Hospitalière dans les Pays en Développement — Que Peut-on en Tirer?*

Par Ramesh Govindaraj et Mukesh Chawla

22. School Health Insurance — The Experience in Egypt: A Case Study

By A.K. Nandakumar and Ali Swelam

23. National Health Accounts in Developing Countries: Appropriate Methods and Recent Applications

By Peter Berman

23S. Cuentas Nacionales de Salud: Métodos y Aplicaciones

Por Peter Berman

24. Hospital Autonomy in Kenya: The Experience of Kenyatta National Hospital*

By David H. Collins, Grace Njeru and Julius Meme

25. Hospital Autonomy in Zimbabwe*

By Jack Needleman and Mukesh Chawla

26. Hospital Autonomy in Indonesia*

By Thomas Bossert, Soewarta Kosen, Budi Harsono and Ascobat Gani

27. Hospital Autonomy in India: The Experience of APVVP Hospitals*

By Mukesh Chawla and Alex George

28. Hospital Autonomy in Ghana: The Experience of Korle Bu and Komfo Anokye Teaching Hospitals*

By Ramesh Govindaraj, A.A.D. Obuobi, N.K.A. Enyimayew, P. Antwi and S. Ofosu-Amaah

29. Resource Mobilization for the Health Sector in Sri Lanka*

By Ravindra Rannan-Eliya, Nishan de Mel, Daya Samarasinghe, Harsha Aturupane, Hema Wijeratne and Research International (Pvt.) Ltd.

30. Resource Mobilization for the Health Sector in Bolivia*

By Marina Cárdenas Robles, Jorge A. Muñoz and Mukesh Chawla

31. Resource Mobilization for the Health Sector in Senegal (Working Draft)*

By Moustapha Sakho, Malick Cisse, Laurence Codjia, Soumaïla Compaore and Mukesh Chawla

* / Reports supported by Health and Human Resources Research and Analysis project (HHRAA) of USAID's Africa Bureau

31F. Etude des Stratégies de Mobilisation des Ressources dans le Secteur de la Santé: Le Cas du Sénégal (Premier Draft)*

Par Moustapha Sakho, Malick Cisse, Laurence Codjia, Soumaïla Compaore et Mukesh Chawla

32. Resource Mobilization for the Health Sector in Zimbabwe*

By Charles Normand, Glyn Chapman, Oliver Mudyarabikwa, Mukesh Chawla and Jack Needleman

33. Resource Mobilization for the Health Sector in Côte d'Ivoire*

By Ministry of Public Health and the National Institute of Public Health, Côte d'Ivoire

33F. Mobilisation des Ressources de Santé en Côte d'Ivoire*

Par Ministère de la Santé Publique et Institut National de Santé Publique, Côte d'Ivoire

35F. La Mobilisation des Ressources: Sommaires des Expériences des Etudes*

Book: Health Sector Reform in Developing Countries: Making Health Development Sustainable

By Peter Berman, Editor, Harvard University Press.

* / Reports supported by Health and Human Resources Research and Analysis project (HHRAA) of USAID's Africa Bureau

Cote d'Ivoire Resource Mobilization

Executive Summary

Resource mobilization in the health sector of Cote d'Ivoire is influenced by actors at various levels of the public and private sectors. In the public sector are the major institutional actors, including the Ministry of Health (MOH), the Ministry of Planning and Industrial Development (MOPID), and the Ministry of Industry of the Interior and National Integration (MOINI). In the private sector the insurance companies -- the CNPS (Caisse Nationale de Prevoyance Sociale), and the MUGEF-CI (Mutuelle generale des Fonctionnaires et Agents de l'Etat - Cote d'Ivoire) -- are highly influential actors in resource mobilization. In addition, ever since 1972 when the FRAR (Fonds Regionaux d'Amenagement Rural Social) was established, households have participated indirectly in the financing of the health system, particularly with the introduction of cost recovery programs. In addition, a strong and complex social network involves the population in significant ways in the mobilization and redistribution of resources. Finally, it should be noted that drugs are purchased through both public and private sources.

Public Sector Expenditure

In 1995, on an approved budget of close to 80 billion CFA, the MOH spent approximately 63 billion CFA or 80% of the budget, and the MOPID raised 1.6 billion CFA through the FRAR. The MOINI augmented the funding available for the health sector by allocating an average of 450,000 CFA per *commune* annually. This expenditure was calculated before the creation of 61 new rural *communes*, which increased the number of *communes* in Cote d'Ivoire from 135 to 196. On the assumption that the increase in the number of *communes* does not affect the average expenditures per *commune* (i.e, the new *communes* are subject to the same rules as the old ones), the *communes* spend 88 million CFA for health care per year.

Private Sector Expenditure

The private sector is principally represented by the private insurance companies, the MUGEF-CI, the CNPS, and the FSU-COM. However, since the FSU-COM is limited in scope, it cannot be considered a mechanism for resource mobilization on a national scale. Between 1991 and 1994, the annual growth rate of premiums recovered by private companies was 10.7%, an increase of 4.7% for claims paid in previous years. The value of premiums thus collected in 1995 is estimated at 8.6 billion CFA, of which 6.4 billion CFA was disbursed in benefit payments. The MUGEF is attempting to level off its expenditures for services at a level of 6 billion CFA. Finally, the *branche maladie* or health division of the CNPS (AT/MP and receipts from the Medico Social Centers), collected fees totaling about 3.5 billion CFA.

Cost Recovery

In its modern form (decree 93-216 of February 3, 1993), cost recovery is considered an innovation, while all other methods of financing detailed here have been in place for many years.

Mobilization of Funds

The analysis of cost recovery in Cote d'Ivoire has been facilitated by the development of a performance indicator--"the coefficient of mobilization" -- which compares the total collection of fees by facilities with the amount of public funds allocated to them. It is generally observed that the payment recovered from users is proportional to the budget allocation received from the MOH. The central budget has both an "incentive" and "disincentive" effect on health facilities. The "incentive" effect is that despite the low level of public funds allocated to them, health facilities generate a large volume of their own resources. This is the case in the East Central and Southwest regions where the mobilization coefficients are .73 and .54 respectively. On the other hand, there is also a "disincentive" effect, especially regarding health training. These programs benefit from significant public contributions, they have little incentive to mobilize their own resources well. The level of the State's contribution seems to negate the ability of the health facilities to fully realize the potential of cost recovery activities. This is the case in the North Central and North regions, where the coefficients of mobilization are .20 and .30 respectively.

Allocation of Resources

A second aspect of analyzing cost recovery is its impact on resource allocation. It is found that financial managers of health organizations which have access to governmental and non-governmental sources of income do not substitute one source of income for another. Instead, the income budget reinforces preexisting tendencies of public-money spending, rather than providing formulas for substitution. Thus a comparison of the two types of spending--the income budget and the public-money budget--made on the basis of two trial regions (Central-East and Central-North), reveals that both kinds are organized around a dominant scheme that includes daily expenses, technical equipment, office supplies and maintenance of equipment.

Quality of Care

Last but not least is quality of care. Though the study did not conduct surveys to evaluate the satisfaction of the population, there has been an attempt to determine to what extent cost recovery can be used as an investment for promoting quality of care. Responses to questions regarding the incidence of resource allocation indicate that, in general, the dimension of quality seems to be recognized. An indicator was used to refine the analysis represented by the ratio: expenditure for budget for own resources/public budget expenditures (ratio calculated by function of expenditure). This indicates the proportion to which the expenditure of Budget for own Resources covers the expenditure of BGF. The ratio is highest for technical supplies: .58 for Central-East health facilities and .31 for Central-North health facilities. Therefore, without testing the conclusion in the

field by evaluating, for example, the availability of small supplies/equipment and medical products or the cleanliness of buildings and equipment, the conclusion is that the quality improved significantly with the introduction of cost recovery. It therefore appears that the financial influx really translates into physical benefits in terms of quality of care.

Between October, 1994, and June, 1996, the total fees collected by urban health facilities shows a tendency to level off in the context of cost recovery: 439 million CFA were recovered during the last trimester of 1994, versus 417 million CFA between January to March, 1996, and 383 million CFA between April and June, 1996. This stagnation, coupled with the gains made in increased utilization of publicly-mobilized resources, clearly illustrates the importance of personnel motivation and incentive systems to maximize the return on the cost recovery strategy in the public health care system. It is thus appropriate to revise the rules governing cost recovery by fees, and to increase autonomy and resources at the local level while suppressing the portion of cost recovery currently reserved for the Treasury. Serious reform of working conditions for health professionals is necessary to improve personnel motivation. Because the current system is felt by the majority to be so inequitable, the only motivation people have is to use the dysfunctional system to their advantage.

Private Actors

There are many constraints and obstacles on private actors. The FSU-COM is interested in public health only if it is able to increase its staffing. Furthermore, many strong and contradicting individual rationales and strategies coexist within the structure. Financial stability particularly influences the behavior and orientation of researchers, who in turn influence the sustainability of control within the structure. According to M. Bangoura, Secretary-General of the MOH in Guinea, "The action of the management committee for health facilities is, above all, polarized on financial management to the detriment of social mobilization."

Given the current state of affairs, the private insurance companies are presently not interested in playing a more active role in resource mobilization for health care. For them, illness is nothing but a product and the *branche maladie* a dead weight rather than a source of financial gain. The losses accumulated in 1991, 1992, and 1993 illustrate the danger in managing this risk: -1.3 billion, -233 million, and -1.1 billion CFA, respectively. Mobilization of resources by the CNPS underlines the absence of a defined political consensus between employers and the unions. The CNPS limits itself to work-related accidents and illnesses despite the existence of health care programs, which are being developed but which currently have a relatively limited scope. At the same time, the companies provide for important health care expenditures for their employees outside of the CNPS circuit. It is evident that the rationale used cannot pass for a real policy. Finally, a significant limitation of the CNPS is that it reaches only active salaried staff. The foreseen trends of the labor market in Africa are moving toward growth in the informal sector, rather than in the expansion of salaried labor. The MUGEF's situation this calls into question the issue of protection of the State and of management autonomy and

financial risk. Given the current situation, it seems that a strategy for mobilizing resources based on socio-professional categories is incompatible with a more general strategy for achieving a coherent public health policy and guaranteeing financial stability. Such a strategy would lead to personnel issues, including inter-professional relations and redistribution of employees.

Finally, it is obvious that in order to be cost-effective and to improve the access to care for the poor, all strategies of resource mobilization must include research on new practices for importing and distributing medicines. One reform would be to amend the existing legal and regulatory framework to allow non-traditional actors, such as the PSP and the private wholesale distributors, to import and distribute drugs.
